

CLAIMS AMENDMENTS:

Please amend the Claims as follows:

Claims 1-4 (Canceled).

Claim 5 (New). A paint brush with an angle adjustable handle for increased

5 functionality and ease, comprising:

a paint brush section having bristles and a U-shaped component extending from the paint brush section;

a handle having first and second ends, said first end is an encircling end that clamps around the U-shaped component, said second end opposite the first encircling end
10 having a hook and an end piece that lock together such that the handle is locked to the U-shaped component of the paint brush section,

said first encircling end including protrusions that add a clamping force to the handle.

Claim 6 (New). A paint brush comprising:

15 a brush section comprising bristles and a component, said component comprising an arc,

a handle section comprising a first end and a second end, said first end of said handle section clamps around and onto said component of said brush,

wherein said handle section is clamped onto said component in a selected angular
20 orientation.

Claim 7 (New). The paint brush of Claim 6 wherein said handle section comprises a first leg and a second leg that lock together in a locked position, and have a V-shape when in an unlocked position.

Claim 8 (New). The paint brush of Claim 6 wherein said handle section first end comprises a semicircular section that partially encircles said component to clamp around said component.

Claim 9 (New). The paint brush of Claim 6 wherein said component is a U-shaped component comprising an arc, a first side and a second side, said second side being parallel to said first side.

Claim 10 (New). The paint brush of Claim 9 wherein said brush section clamps around one of said arc, said first side of said component, and said second side of said component.

Claim 11 (New). A paint brush comprising:
a brush section having bristles and a U-shaped component; and
a handle section having a first end and a second end, said first end being lockably connectable to said U-shaped component,
wherein said handle section is selectably and lockably oriented in a desired angular position with respect to said brush section.

Claim 12 (New). The paint brush of Claim 11 wherein:
said handle section comprises:

a first leg with a first end and a second end; and

a second leg with a first end and a second end; and

said first end of said first leg and said first end of said second leg form a semicircular end of said handle section that encircles said U-shaped component in a desired location and orientation.

Claim 13 (New). The paint brush of Claim 12 wherein said second leg second end comprises a hook for receiving said first leg second end to lock said handle section.

Claim 14 (New). The paint brush of Claim 12 wherein said semicircular end of said handle section further comprises protrusions.

5 Claim 15 (New). The paint brush of Claim 11 wherein said U-shaped component comprises an arc, a first side and a second side.
